

E. Environmental Policy

At EW we will reduce the environmental impact from our activities from sales of medical devices. We will require that our manufacturers keep continual focus on environmental issues with implementation of environmental management system in compliance with ISO 14001.

Where we at EW have a positive environment impact is by introduce products with less environmental impact to our customers.

Specifically, we will focus on:

- Continue introduction and sales of gloves which are produced using less or none chemical accelerators.
- Strengthen our focus on biodegradable gloves especially to clients in regions with reduced sanitation services related to solid waste disposal.
- Overall using packaging material with less environmental impact such as recycled paper and FSC certified paper product.

On the internal lines at EW we will participate in and learning from organizations with focus on environmental aspects related to our products and manufacturers including Etisk Handel Danmark and UN Global Impact

We, the management at EW commit to continuously improve our environmental management system and performance, to the benefit of EWs interested parties – and assure that the management system can achieve it's intended outcomes. The management further commit to ensure that we will maintain our management system for preventing or reducing undesired effects, including the potential for external environmental conditions to affect the organization.

Communication of Environmental Policies

Our Environmental policy is communicated through our web-page and to customers on requirement, specifically when engaging in larger tenders. We evaluate the relevance and effectiveness of our communication ((What we will communicate; When to communicate; With whom to communicate; How to communicate) at the Management Review (QP-31).
